How Would You Like To Have Orchids Blooming In Your Home 365 Days In The Year!?

Well, you can, with the new Epi-Cattleya Orchid plants. These are not wild, jungle plants, but hybrid orchids developed by crossing Epidendrum, Cattleya and Laelia Orchids. The flowers are intensely vivid, in gorgeous shades of red, orange, wine, cherry, pink, burgundy, yellow, canary, apricot, peach, coral, rose, tangerine, salmon, and dozens of other shades. The flowers are borne in a clustered head of 25 to 75 flowers. A single spray will often produce 150 flowers.

These are the easiest Orchids in the world to grow anywhere. You can grow them in soil, sand, sea shells, marbles, pebbles, sawdust, peat moss, or most anything! They will thrive and grow in any home whether you live in the far north or the desert. Mature plants bloom continuously. I have one that has not been out of bloom in over 500 days! Even young plants will bloom for you 200 days out of the first year! All plants will be shipped in BLOOM or in BUD postpaid, with instructions for growing.

3 Plants with 3 flower spikes, asst. colors, \$5.35

6 Plants with 6 flower spikes, asst. colors, 9.35

12 Plants with 12 flower spikes, asst. colors, 14.35
